**BOSE**<sup>®</sup>

## Product Description

Bose PowerShare PS602 adaptable power amplifier delivers 600 watts for fixed-install applications. Through patented technology, total amplifier power is shared across all output channels, allowing installers the freedom to utilize power where needed. With support for both low- and high-impedance loads up to 100V, PowerShare amplifiers adapt to a wide range of applications. Onboard configurable loudspeaker processing and direct access to zone controllers eliminate the need for an additional signal processor in many installations, while outstanding audio performance and reliability are assured with patented technologies inherited from the field-proven PowerMatch<sup>®</sup> line. This unique set of features and technologies makes PowerShare one of the most versatile high-performance amplifiers available.

## Key Features

- **PowerShare Technology** – Patented PowerShare technology allows the total 600 watts of power to be shared asymmetrically across all outputs, as each output is capable of delivering full power. Instead of selecting amplifier power based on the needs of the largest zone, installers now have the freedom to use total amplifier power in the application. This enables more flexibility during the initial design, or later on-site when making unplanned changes that take advantage of surplus power.
- **Load-Independent Outputs** – Each channel can be configured for low-impedance (4-8  $\Omega$ ) or high-impedance (70/100V) applications without bridging, use of jumpers, or software settings.
- **DFL™ System** – The Dual Feedback Loop system, inherited from the field-proven Bose PowerMatch<sup>®</sup> amplifier line, improves performance and reliability through continuous monitoring and control of both the current and voltage delivered to each output load. This combination provides improved linearity and lower distortion, while protecting loudspeakers.
- **Integrated Loudspeaker Processing with Optional PowerShare Editor Configuration** – For applications requiring additional signal processing the PowerShare Editor Software offers real-time selection and control of Bose loudspeaker EQs, 9-band PEQs, standard mixing, crossover, delay, and mute/output polarity through a USB connection. For basic setups without a PC, rear-panel settings allow installers to recall Bose loudspeaker equalization and protection per output channel. These features eliminate the need for an external signal processor in many applications.
- **ControlCenter Zone Controller Accessories** – Bose ControlCenter CC-1 zone controllers can be directly attached for remote adjustment of amplifier outputs further extending stand-alone amplifier applications.

- **Auto-Standby** – Designed to save power consumption when not in use. PowerShare amplifiers can be configured to automatically enter standby mode when the audio signal falls below a set threshold, then wake when audio returns.

## Applications

TECHNICAL DATA SHEET

- ❶ **POWER switch** – ON/OFF AC power.
- ❷ **Power LED**
  - Solid green LED indicates the unit is ON.
  - Blinking green LED indicates the unit is in low-power mode.
  - Solid amber LED indicates an over-temperature fault.
  - Solid red LED indicates a power supply fault.
- ❸ **INPUT 1 & 2 SIGNAL LED** – Each LED operates independently.
  - Green LED indicates signal is present.
  - Amber LED indicates signal is near clipping.
  - Red LED indicates clipping.
  - LEDs will display solid red if a power supply fault is detected.
- ❹ **OUTPUT 1 & 2 LIMIT LED** – Each LED operates independently.
  - LED is amber when the amplifier is limiting the corresponding output due to exceeding the specified loudspeaker  $V_{peak}$  or  $V_{rms}$  limits.
  - If the sum of the amplifier outputs exceeds 600 watts, then the amplifier will limit all outputs equally, and all LEDs will show limiting simultaneously.
  - LEDs will display solid red if an amplifier, power supply, or EHF fault is detected.
  - LEDs will blink red when all outputs are muted.

- ❶ **INPUT 1 & 2** – Balanced 3-pin Euroblock and unbalanced RCA line-level input connectors.
- ❷ **USB** – Connect the amplifier to a PC using a USB connection. This allows you to use the PC-based PowerShare Editor software to configure the advanced features of the amplifier.
- ❸ **CHANNEL 1 & 2 EQ** – Each dial provides loudspeaker equalization presets per channel: DS 16, DS 40, DS 100, FS3B, 402, 802, MA12EX, RMU105, and RMU108. Use the Flat setting for FS3 Systems.
- ❹ **CONTROL CENTER** – RJ-45 input connector for Bose CC-1 ControlCenter zone controllers or CV41 4-to-1 converter only.
